U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06) In response to applicant's arguments on page 4, in regards to "aggregating", it is noted that Eick specifically discloses wherein a user may enter a search feature (title, column 9, lines 51-61). The results of this request are then displayed to the user in aggregated form, as each individual letter, such as "N", represents all of the results which begin with N. (see Fig. 19-20). Thus, applicant's arguments are not convincing.

In response to applicant's arguments in regards to a "second axis", as seen in Fig. 23, Eick discloses wherein the subset of results is displayed along the time axis (horizontal) on the display, indicating occurences of the specific selected program (column 10, lines 20-55). Additionally, Eick discloses wherein the symbols are displayed along a first axis on the display (vertical; Flg. 22), thus meeting the claim language.

In response to applicant's arguments on page 5, as clearly seen in Figs. 19-22, Eick discloses wherein the results are aggregated into subsets based upon a second feature, i.e. second letter in the program title. This clearly reads upon the broad limitation of a "feature", and therefore applicant's arguments are not persuasive.
